Tape

The proof-carrying options desk.

An autonomous agent that trades options on Alpaca paper,
prints a serial-numbered receipt for everything it does,
then reconciles its own journal against the broker. Every cycle.

tape.up.railway.app · github.com/A-Raphie/tape · PA37YPE0PC51

Nobody watches it.

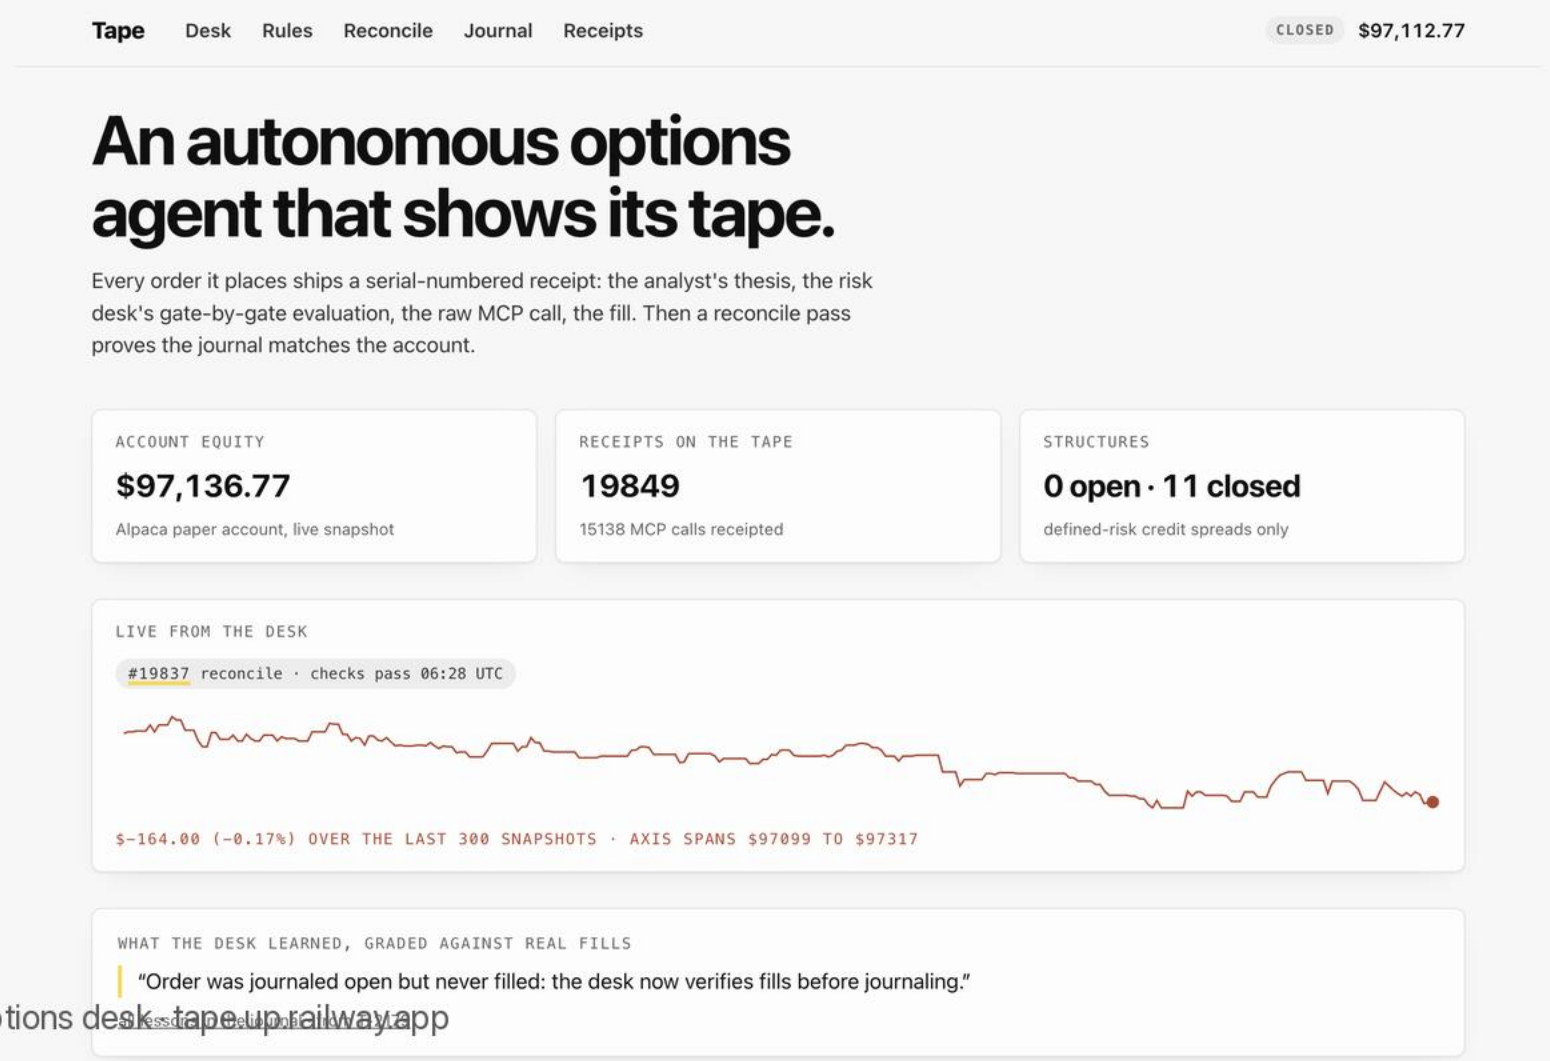

Nobody approves its trades.

An agent gets $100,000 and permission to trade options.

So the only question that matters: when it acts, can you prove what it did?

Tape's answer: every scan, proposal, gate run, order, and self-repair ships as a numbered receipt. 19,849 of them and counting.

Live blotter. Losses in red, next to the wins.

CLICK ANY FILL

The receipt unfolds.

WHAT HAPPENED

in one sentence.

WHY

the analyst's own reasoning, citing the delta it saw.

THE TRADE

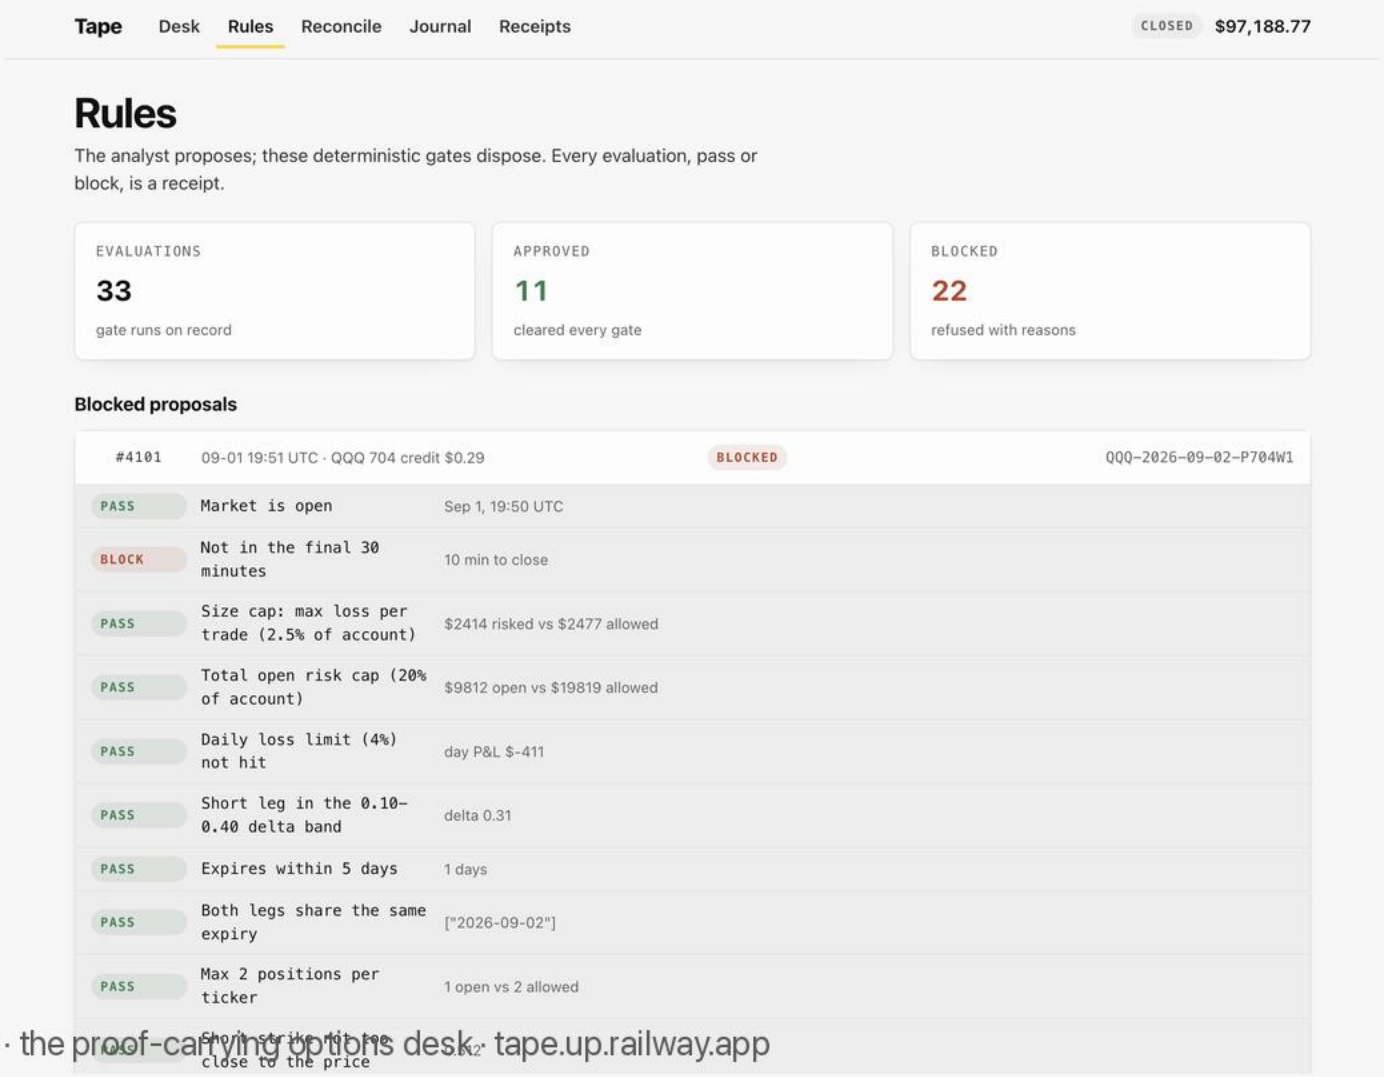

in English: sell the lower call, buy the one a dollar higher.

CASH COLLECTED NOW

WORST CASE AT EXPIRY

No dashboard can fake this.

The model proposes. Code disposes.

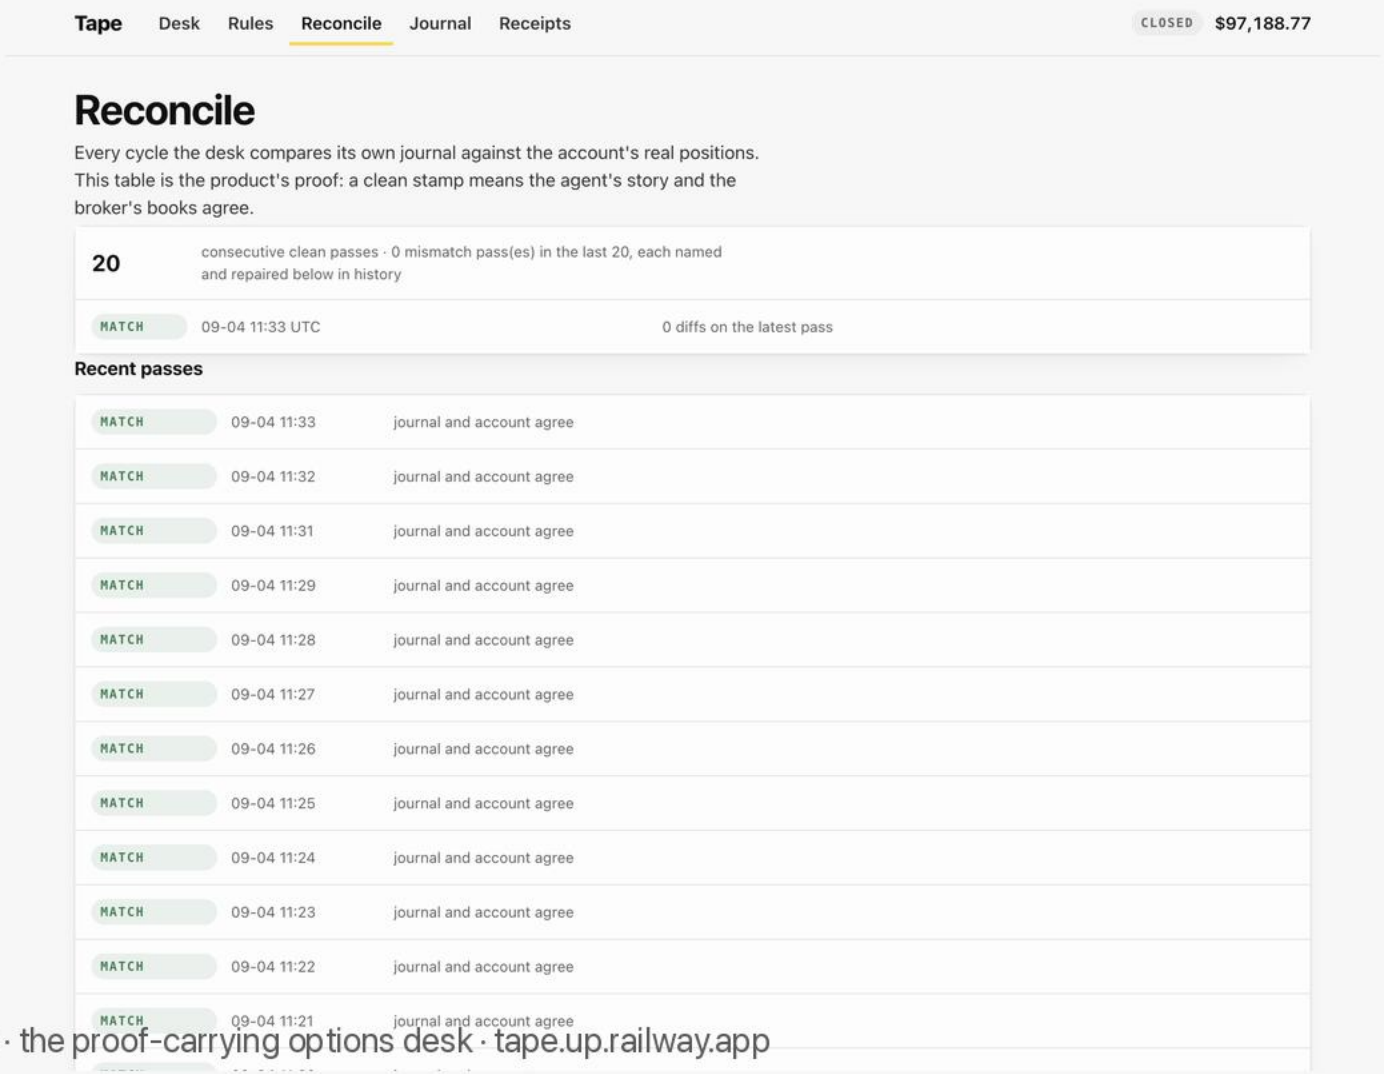

33
gate runs on record

11
approved

22
blocked, reason shown

13 deterministic gates. The LLM can propose, it can never size a trade or weaken a rule.

The journal vs the broker, every cycle.

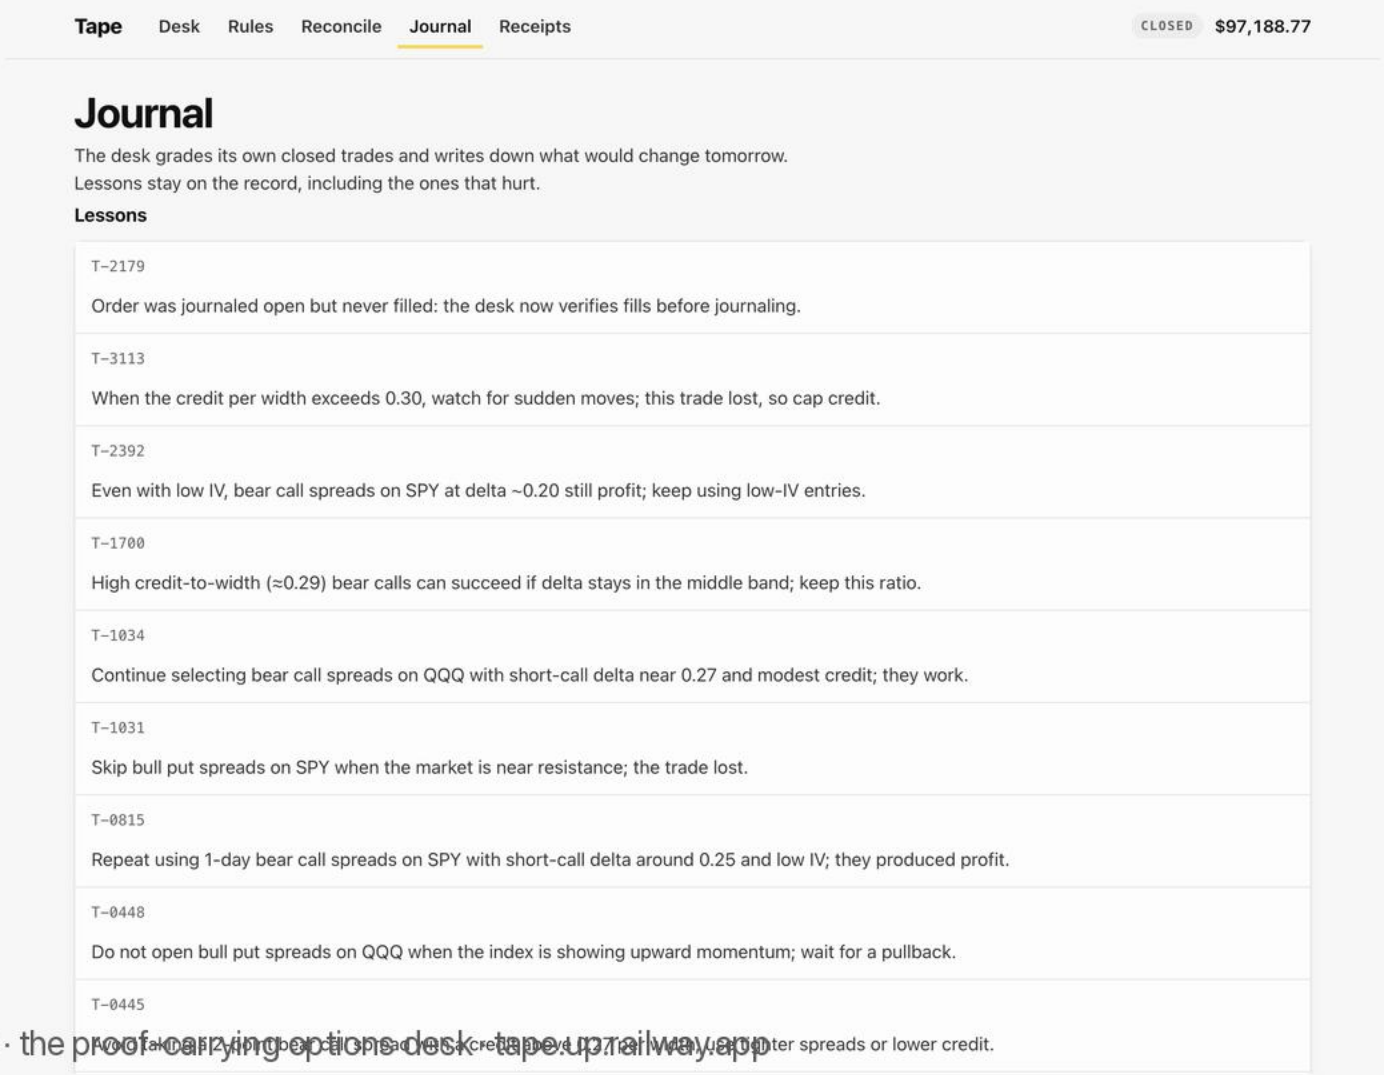

Day two, the desk froze for an hour. Nobody was watching.

The reconcile table caught it in public: six mismatches, named and repaired.

The system that watches the agent exists because it failed once, loudly.

It grades itself. In public.

10 lessons from real fills.

The ones that hurt stay up:

"Order was journaled open but never filled: the desk now verifies fills before journaling."

The model proposes. Code disposes.

- **Groq analyst**
  reads state + chain, proposes a defined-risk spread with its thesis
- **13 gates in code**
  size, delta band, DTE, liquidity, halts. The LLM touches none of them
- **Executor**
  submits only what was approved, via Alpaca's MCP server
- **Journal**
  every proposal, gate run, call, fill: a serial receipt
- **Reconcile**
  journal vs broker, every cycle. Diffs become named repairs

What is real. What went wrong.

REAL

The live site is the agent's own journal. Losses in red on the front page. Paper only.

WENT WRONG

Day 2: a 90-minute freeze held 0-DTE spreads into expiry. Assignment: -$54,152. Account retired, archived as receipts.

ON THE BOOK

A Sep 3 expiry left -200 SPY short stock. It is marked live, receipted, and flattened by the Friday rule.

WHY IT MATTERS

The reconcile wall exists because the desk failed once, loudly, and kept the receipt.

THE NUMBERS

EQUITY	RECEIPTS	MCP CALLS	LESSONS
$97,1xx	19,849+	15,138	10
live, ticking	serial-numbered	journaled, raw	self-graded

Everything above is clickable on the live desk, traceable to a serial number.

Tape: the tape doesn't lie. Now the agent can't either.
